

Investment Strategy

- Bottom up stock picking strategy, based on company interviews/fieldwork and fundamental research/analysis.
- We seek to identify exceptional companies able to sustain consistent earnings growth through economic cycles.
- The strategy seeks to outperform the market by selectively buying and holding stocks over the mid-to-long term, typically three to five years. Consequently, the turnover of our portfolio is low.
- We do not invest in stocks for purposes of managing risk against benchmarks.
- Stable earnings volatility of our holdings allows us to build a concentrated portfolio of 20-30 names.

*Returns for periods under one year are not annualized.

Performance data quoted represents past performance; past performance does not guarantee future results. Gross returns are presented before management and custodial fees, but after all trading expenses and reflect the investment of dividends and other income. Net returns are net of investment management fees in effect for the respective time period and are derived using the maximum highest published rate. Fees charged are at the discretion of Clearbrook. The strategy does not invest in an index. The strategy uses the (TOPIX) Total Return Index as a benchmark only. Performance may be attributable to profits from IPO securities. IPO securities have no trading history and the prices may be volatile. There is no guarantee this level of performance will be repeated. Japanese issuers and underwriters prioritize allocations of IPO securities to domestic investors; therefore, overseas investors (not based in Japan) may have less access to small and mid-cap IPO securities allocations than a domestic investor. The investment return and principal value of an investment will change so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the strategy may be lower or higher than the performance quoted. Composite data is calculated in JPY and converted to USD using the WM/Reuters Closing Spot Rates 4pm London close. The TOPIX is also converted from JPY to USD using the same exchange rate source.

Market and Strategy Commentary Q4: October 2024, USD Net

Japan Markets:

- Japanese equities declined in October, with the TOPIX Index returning -4.33% USD. Although the market advanced in the local currency base, the performance turned negative due to the depreciation of the Japanese yen.
- Early in the month, Japanese equities advanced due to solid U.S. employment data and expectations for the FRB's gradual rate cuts. Japan's Prime Minister Ishiba's statement of caution against further rate hikes soon helped the Japanese yen weaken against the U.S. dollar, which supported the Japanese stock market.
- The market fell in the middle of the month as a Dutch SPE maker, ASML, announced sluggish earnings results, prompting the selling of semiconductor-related stocks. Investor risk tolerance also declined due to political uncertainty ahead of the upcoming lower house election. After the election, however, the market rallied as the LDP's failure to achieve a coalition majority increased expectations for economic stimulus through possible policy coordination with opposition parties.

MUFG Japan Focus Growth Strategy:

- The strategy returned -4.53% USD, underperforming the Index by 0.20%.
- The top contributor was Advantest Corp., a global leading semiconductor test equipment manufacturer. The share price rose on growing expectations for an upward revision to the FY3/25 earnings guidance, driven by surging test demand related to generative AI. In addition, Advantest Corphad significantly better-than-expected Q2 FY3/25 earnings results.
- Another notable contributor was Recruit Holdings Co., Ltd., a provider of human resource technology, marketing media, and temporary staffing services. The share price rose, supported by continued positive trend from early August with the release of better-than-expected Q1 FY3/25 earnings results, as well as a high progress rate in share buybacks.
- On the other hand, the largest detractor was Nomura Research Institute, Ltd., one of the biggest consulting service providers and information technology solution providers in Japan. Its Q2 FY3/25 earnings results were in line with market expectations, excluding the one-off impairment losses related to the data center closure. However, the share price reacted negatively to weak orders in the Industrial IT Solutions business and a delayed recovery in overseas business.
- Another detractor was Fuji Electric Co., Ltd., an innovator of electric and thermal energy technologies, due to concerns about a growth slowdown in the semiconductor business caused by a continued production stagnation of main clients, such as automotive and factory automation industries. The announcement that a major U.S. client was beginning to explore a strategic partnership with a competitor, also weighed on the share price.

The opinions expressed herein have not been prepared with a view toward public disclosure under applicable securities laws or otherwise, are intended for the benefit and use of the specific recipient. **Past performance does not guarantee, and is not indicative of, future results.** It is impossible to predict whether the value of any strategy or index will rise or fall over time. Actual performance may be lower or higher than the performance quoted. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. Such risks are particularly significant for a strategy that focuses on a single-country.

Mitsubishi UFJ Trust and Banking Corporation (MUTB) claims compliance with the Global Investment Performance Standards (GIPS®). A complete list of firm composites and performance can be requested from Natasha Koprivica at nkoprivica@clbrk.com or 857.919.1048. Performance numbers have been provided by MUTB and have not been verified by Clearbrook Investment Consulting.

Please see the GIPS® Compliant Performance Report for further explanation. The comparative benchmark is the TOPIX Total Return Index. TOPIX is a free-float adjusted market capitalization-weighted index that is calculated based on all the domestic common stocks listed on the TSE First Section. TOPIX shows the measure of current market capitalization assuming that market capitalization as of the base date (January 4, 1968) is 100 points. **One cannot invest directly in an index.** **Beta:** systematic risk of a composite; represents sensitivity to the benchmark. **Excess Return (Gross):** amount that gross returns exceed relative benchmark return. **Information Ratio:** ratio of expected return to risk, as measured by standard deviation. **Price to Book (P/B):** ratio of stock price to book value. **Price to Earnings (P/E):** ratio of stock price to earnings. **Return on Equity (ROE):** net income divided by equity. **Standard Deviation:** measures dispersion of a set of data from its mean. **Tracking Error:** measures the active risk of the composite and the annualized standard deviation of the excess returns between the composite and its benchmark. **Weighted Average Market Cap:** total value of all outstanding shares weighted by market capitalization.
